

OUR TECHNOLOGY

Jantech utilizes 'Best in Class' test, measurement and load bank equipment from Fluke, Hioki, Flir, Avtron and others to conduct all vitally important tests as specified by both the customer and by individual equipment manufacturers

OUR PEOPLE

Jantech's staff of technicians are committed to providing the best service possible. Our technicians are qualified on most major Central Systems brands augmented by our internal system and OSHA safety training programs

WHY JANTECH

Jantech has been in the business of selling and maintaining power systems at mission critical facilities for more than 25 years. We provide Experience you need and service you expect. Our knowledge of Central Inverter/ UPS Systems from most major manufacturers is second to none. We have 7x24x365 Technical Support and technician dispatching as well as hundreds of thousands of parts in our multi-site warehouses. Our internal continuing education programs make sure that our technicians stay up to date on all ongoing changes inside the Critical Power Industry.

Emergency Lighting UL924 Central Power Systems Maintenance Services

UL 924 Emergency Lighting Central Inverter/ UPS Systems are different than other mission critical power systems in that their application is life safety in emergency situations. They are capable of powering emergency lights for 90 minutes in the event of a power failure. Batteries are at the heart of every UL924 Central Inverter/ UPS System and they are also the cause of most failures. When replacements are required most end users, facilities personnel and even some service personnel don't know that the replacement batteries must be certified by UL for use in that particular Central Inverter/ UPS System. It is imperative that these systems are regularly tested and maintained so that in the event of a power failure emergency lights will operate and allow for an illuminated means of egress for people in the building.

Maintenance Services Available May Include:

- Visual Inspections
- Voltage Recording
- Current Recording
- Pull Testing
- Vacuuming
- Cleaning
- Waveform Recording
- Calibration
- Thermo-scanning
- Load Bank Testing
- Air-Filter replacement
- AC and/or DC Capacitor Replacement (if needed)
- Repair

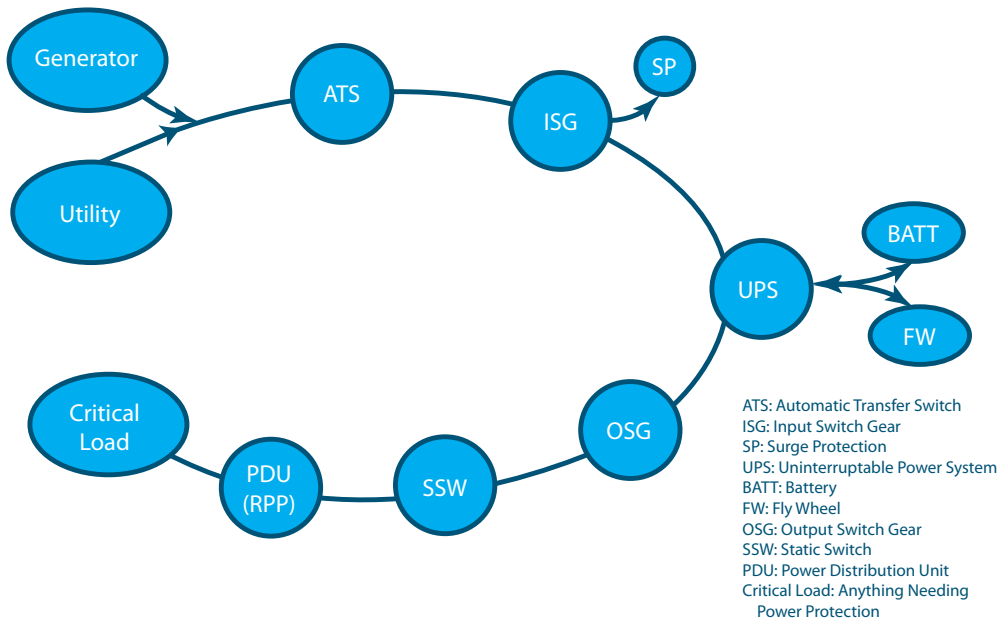

Jantech offers a variety of UL 924 Central Inverter/ UPS System Maintenance programs ranging from an annual basic preventive maintenance inspection (5x8) to a full service agreement (7x24x365) parts and labor included. We also offer full battery maintenance and replacement as well as wear item replacement programs, including fans, capacitors and air filters and acceptance testing. All work is done to your specific requirements and to the UL 924 specifications. You can rest assured when your equipment is properly maintained it will be ready in-case of emergency.

Benefits Include:

- Maximized System Performance
- Decreased Critical Load exposure to downtime
- Minimized Unscheduled Emergency Service callouts
